Universitätsmedizin:

Die Veröffentlichung des Modulverzeichnisses zur Prüfungs- und Studienordnung für den internationalen konsekutiven Master-Studiengang „Molecular Medicine“ (Amtliche Mitteilungen II Nr. 12/2024 S. 11459 ff.) ist fehlerhaft und wird hiermit für ungültig erklärt. Nachfolgend erfolgt die korrekte Veröffentlichung.

Nach Beschluss des Fakultätsrats der Medizinischen Fakultät vom 10.06.2024 hat der Vorstand der Universitätsmedizin Göttingen am 23.07.2024 die Neufassung des Modulverzeichnisses zur Prüfungs- und Studienordnung für den internationalen konsekutiven Master-Studiengang „Molecular Medicine“ genehmigt (§ 44 Abs. 1 Satz 2 NHG; §§ 37 Abs. 1 Satz 3 Nr. 5 b), 44 Abs. 1 Satz 3 NHG i.V.m. § 63 b Satz 3 NHG).

Die Neufassung des Modulverzeichnisses tritt nach deren Bekanntmachung in den Amtlichen Mitteilungen II zum 01.10.2024 in Kraft.

Directory of Modules

**Master's degree programme "Molecular Medicine"
- referring to: Prüfungs- und Studienordnung
für den internationalen konsekutiven Master-
Studiengang "Molecular Medicine" (Amtliche
Mitteilungen I No. 26/2024 p. 714)**

Modules

M.MM.005: English for Scientists.....	14049
M.MM.007: Inflammatory Response of the Liver.....	14050
M.MM.009: Molecular Imaging in Biomedical Research.....	14051
M.MM.010: State-of-the-art methods in biomedical research.....	14052
M.MM.011: Drug Discovery and Project Management in the Pharmaceutical Industry.....	14054
M.MM.012: Tumor Genetics.....	14055
M.MM.017: Auditory Neuroscience.....	14056
M.MM.018: Modelling and Targeting Pancreatic Cancer Subtypes.....	14058
M.MM.019: Modern Aspects of Human Genetics.....	14059
M.MM.021: Experimental, epidemiological and clinical approaches in dermatology.....	14060
M.MM.022: Committee work in student or academic self-administration.....	14061
M.MM.023: The Biotech Industry.....	14062
M.MM.101: Biomolecules and Pathogens.....	14063
M.MM.102: From Cells to Disease Mechanism.....	14065
M.MM.104: Current Topics in Molecular Medicine.....	14067
M.MM.105: The Disease-Affected Heart and Kidney.....	14068
M.MM.106: The Disease-Affected Brain.....	14069
M.MM.107: Lab Rotation Brain and Heart.....	14070

Index by areas of study

I. Master-Studiengang "Molecular Medicine"

Es müssen Leistungen im Umfang von 120 C erfolgreich absolviert werden.

1. Compulsory Modules

Es müssen folgende sechs Module im Umfang von insgesamt 76 C erfolgreich absolviert werden:

M.MM.101: Biomolecules and Pathogens (24 C, 23 SWS).....	14063
M.MM.102: From Cells to Disease Mechanism (24 C, 24 SWS).....	14065
M.MM.104: Current Topics in Molecular Medicine (4 C, 3 SWS).....	14067
M.MM.105: The Disease-Affected Heart and Kidney (7 C, 4 SWS).....	14068
M.MM.106: The Disease-Affected Brain (5 C, 3 SWS).....	14069
M.MM.107: Lab Rotation Brain and Heart (12 C, 15 SWS).....	14070

2. Wahlmodule (Professionalisierung - Schlüsselkompetenzen)

Es müssen Wahlmodule zum weiteren Erwerb von Schlüsselkompetenzen im Umfang von insgesamt wenigstens 14 C erfolgreich absolviert werden. Es können folgende Module belegt werden:

a. Module der Medizinischen Fakultät

M.MM.005: English for Scientists (4 C, 2 SWS).....	14049
M.MM.007: Inflammatory Response of the Liver (2 C, 1,5 SWS).....	14050
M.MM.009: Molecular Imaging in Biomedical Research (3 C, 2 SWS).....	14051
M.MM.010: State-of-the-art Methods in Biomedical Research (2 C, 1,5 SWS).....	14052
M.MM.011: Drug Discovery and Project Management in the Pharmaceutical Industry (2 C, 2 SWS).....	14054
M.MM.012: Tumor Genetics (2 C, 1 SWS).....	14055
M.MM.017: Auditory Neuroscience (3 C, 2,5 SWS).....	14056
M.MM.018: Modelling and Targeting Pancreatic Cancer Subtypes (4 C, 3 SWS).....	14058
M.MM.019: Modern Aspects of Human Genetics (2 C, 1 SWS).....	14059
M.MM.021: Experimental, epidemiological and clinical approaches in dermatology (3 C, 2 SWS).....	14060
M.MM.022: Committee work in student or academic self-administration (2 C, SWS).....	14061
M.MM.023: The Biotech Industry (2 C, 2 SWS).....	14062

b. Schlüsselkompetenzen (universitätsweit)

Es können neben den o.g. Modulen der Medizinischen Fakultät auch Module aus dem Angebot des universitätsweiten Modulverzeichnisses für Schlüsselkompetenzen belegt werden, ferner Module im Umfang von höchstens 9 C aus dem Modulverzeichnis zur Prüfungsordnung für die Studienangebote der Zentralen Einrichtung für Sprachen und Schlüsselqualifikationen (ZESS) in der jeweils geltenden Fassung.

3. Master's Thesis

Durch die erfolgreiche Anfertigung der Masterarbeit werden 30 C erworben.

Georg-August-Universität Göttingen		4 C
Module M.MM.005: English for Scientists		2 WLH
Learning outcome, core skills: In the course "English for Scientists" the students extend their knowledge of the English language in a scientific context at an advanced level. The emphasis in the course for Masters students is on the skills required in positions of responsibility and leadership. The participants will learn to communicate in international situations successfully and with self-confidence in both spoken and written English. After completing the module, the students will be familiar with the fundamentals of: formal writing for the purpose of acquiring research partners and sponsors, telephoning internationally, meetings, and the planning of a visit by international partners. Linguistic abilities will also be promoted by discussion of further relevant themes such as "leadership" and "cultural differences in business" in English.		Workload: Attendance time: 28 h Self-study time: 92 h
Course: English for Scientists (Seminar)		2 WLH
Examination: Written examination (60 minutes) Examination requirements: Composition of a research application in English. Carrying out telephone calls in English. Discussing confidently in English. Planning a visit by international partners.		4 C
Admission requirements: none	Recommended previous knowledge: none	
Language: English	Person responsible for module: Mark Wigfall	
Course frequency: once a year	Duration: 1 semester[s]	
Number of repeat examinations permitted: twice	Recommended semester: 1 - 2	
Maximum number of students: 15		

Georg-August-Universität Göttingen		2 C
Module M.MM.007: Inflammatory Response of the Liver		1,5 WLH
Learning outcome, core skills: After completing the module, students have got an overview of inflammatory diseases of the liver. Students have knowledge about cytokines and chemokines; they got training in the cellular and molecular events that underline the development, progression and resolution of inflammatory response; to be able to differentiate between acute and chronic liver inflammation (acute- and chronic hepatitis), and between inflammatory and immune responses; to understand the role of inflammation and/or the immune response in diseased liver.		Workload: Attendance time: 21 h Self-study time: 39 h
Course: "Chronic inflammation of the liver" (Seminar)		0,5 WLH
Course: "Molecular diagnostics of chronic hepatitis" (Practical course)		1 WLH
Examination: written report (max. 5 pages), not graded Examination prerequisites: Regular attendance in the seminar and the practical course. Examination requirements: Cellular and molecular mechanisms which cause inflammatory processes in the liver. Molecular diagnostics of liver diseases. Adequate presentation of diagnostic results.		2 C
Admission requirements: none	Recommended previous knowledge: none	
Language: English	Person responsible for module: Dr. I. A. Malik	
Course frequency: once a year	Duration: 1 semester[s]	
Number of repeat examinations permitted: twice	Recommended semester: 1 - 3	
Maximum number of students: 5		

Georg-August-Universität Göttingen		3 C
Module M.MM.009: Molecular Imaging in Biomedical Research		2 WLH
<p>Learning outcome, core skills: Upon completion of the module, the student will be familiar with the basics, principles and possible applications of different imaging techniques, such as computed tomography (CT), optical imaging using fluorescent dyes or bioluminescence, positron emission tomography (PET), single photon emission computed tomography (SPECT) and magnetic resonance imaging (MRI) in preclinical research as well as in clinical application. Since extracting valid information from acquired images is crucial, fundamental concepts of image processing and data analysis will be introduced as well.</p> <p>Key learning objectives are to be able to assess the advantages and limitations of each imaging method: Which imaging device can be used for which preclinical and clinical problem? What can be visualized with each individual method?</p> <p>By the end of the module, students are familiar with the procedures for developing new molecular imaging samples regarding specific problems. With this knowledge, students are able to demonstrate long-term perspectives that innovative imaging techniques bring to preclinical and clinical applications.</p>		<p>Workload: Attendance time: 28 h Self-study time: 62 h</p>
Course: Molecular Imaging (Seminar)		2 WLH
<p>Examination: Written examination (30 minutes) Examination prerequisites: Regular attendance at the seminar. Examination requirements: Principles and applications of imaging techniques in molecular medicine research.</p>		3 C
Admission requirements: none	Recommended previous knowledge: none	
Language: English	Person responsible for module: apl. Prof. Dr. med. Frauke Alves PD. Dr. Christian Dullin	
Course frequency: once a year	Duration: 1 semester[s]	
Number of repeat examinations permitted: twice	Recommended semester: 1 - 2	
Maximum number of students: 10		

Georg-August-Universität Göttingen	2 C
Module M.MM.010: State-of-the-art Methods in Biomedical Research	1,5 WLH

<p>Learning outcome, core skills: After successful completion of the module the students can/know ...</p> <ul style="list-style-type: none"> • the basics and the state of the art of mass spectrometry-based proteomic analysis • essential applications of proteomic analysis in the field of biomedical and clinical research and can understand and critically evaluate simple publications in this field • the basic factors of statistical analysis of clinical and experimental data • the most important applications of machine learning methods in the field of biomedical and clinical research • the relevant factors for the planning of experiments • describe the importance and added value of secondary use of data in medical care and research • explain the methodological prerequisites and challenges of data integration and cross-institutional data sharing; name and assess relevant aspects of data privacy and ethics • define the term „biospecimen science“ and provide two arguments for research in this area • describe how the Central Biobank can support research • the basics and the current status of modern MR techniques • the main applications of MR techniques in the field of biomedical and clinical research • read and understand simple publications using MR techniques • the basics and the current state of the art of NGS techniques and applications • the major applications of transcriptome and genome analyses in the field of biomedical and clinical research • NGS pipelines including QC analysis and data preprocessing 	<p>Workload: Attendance time: 21 h Self-study time: 39 h</p>
--	---

Course: State-of-the-art Methods in Biomedical Research (Lecture, Seminar)	1,5 WLH
---	---------

Examination: Minutes / Lab report (max. 5 pages), not graded	2 C
Examination prerequisites: Regular attendance at the seminar.	

Admission requirements: none	Recommended previous knowledge: none
Language: English	Person responsible for module: Dr. Christof Lenz, Dr. Andreas Leha, PD Dr. Sara Nußbeck, Sabine Rey/Prof. U. Sax, PD Dr. Peter Dechent, Dr. Gabriela Salinas, Prof. Wulf
Course frequency: once a year	Duration: 1 semester[s]
Number of repeat examinations permitted: twice	Recommended semester: 1 - 2

Maximum number of students:	
------------------------------------	--

10	
----	--

Georg-August-Universität Göttingen		2 C 2 WLH
Module M.MM.011: Drug Discovery and Project Management in the Pharmaceutical Industry		
Learning outcome, core skills: Upon completion of the module students <ul style="list-style-type: none"> • know the principle of matrix organization as a management concept • have basic knowledge of project work in the private sector • know the processes of drug development: identification of targets, high throughput screening and alternative approaches for hit identification, drug optimization, cell based assay development, ADME, PK, PD, toxicology, in vivo models, clinical trial design, and risk management • have gained insight into industrial drug production 		Workload: Attendance time: 28 h Self-study time: 32 h
Course: Drug Discovery and Project Management in the Pharmaceutical Industry (Seminar)		1,5 WLH
Course: Production of Medication (Excursion)		0,5 WLH
Examination: protocol (max. 5 pages), not graded Examination prerequisites: Complete attendance on all days, active participation in the workshop aspect of the seminar and the excursion.		2 C
Admission requirements: none	Recommended previous knowledge: none	
Language: English	Person responsible for module: PD Dr. Gunnar Dietz	
Course frequency: each winter semester	Duration: 1 semester[s]	
Number of repeat examinations permitted: twice	Recommended semester: 1 - 2	
Maximum number of students: 18		

Georg-August-Universität Göttingen Module M.MM.012: Tumor Genetics	2 C 1 WLH
Learning outcome, core skills: Using primary literature the students will obtain (i.a.): <ul style="list-style-type: none"> • an overview about the role of chromosomal aberrations, oncogenes and tumor suppressor genes during tumor initiation and tumor progression • insights into somatic gene therapy and prospects for the development of adequate therapeutic strategies • an overview about relevant and new techniques in molecular cytogenetics and molecular genetics • a new publication from the field of tumor genetics and the students will work out the relevant methods and results described therein • coaching how to present these methods and results to an audience using PowerPoint followed by a discussion 	Workload: Attendance time: 14 h Self-study time: 46 h
Course: "Tumor Genetics" (Seminar)	1 WLH
Examination: Presentation (approx. 30 minutes) and discussion (approx. 15 minutes) Examination prerequisites: Regular attendance at the seminar. Examination requirements: Work out and adequate presentation of the methods, research results and procedures described in the primary literature. Discussion and questions for the understanding of the presented methods and results.	2 C
Admission requirements: Successful participation of module B.MM.106 (Molekulare Zellbiologie und Molekulare Genetik) or equivalent course	Recommended previous knowledge: Basic knowledge in molecular genetics, cell biology and tumor genetics
Language: English	Person responsible for module: Prof. Dr. rer. nat. Peter Burfeind PD Dr. rer. nat. Silke Kaulfuß
Course frequency: each semester	Duration: 1 semester[s]
Number of repeat examinations permitted: twice	Recommended semester: 1 - 2
Maximum number of students: 14	

Georg-August-Universität Göttingen Module M.MM.017: Auditory Neuroscience		3 C 2,5 WLH
Learning outcome, core skills: The group leaders of the Göttingen Inner Ear Lab will offer seminar lecture to introduce the different scientific approaches they undertake to investigate sensory processing in the ear and hearing rehabilitation. Extensive practical training will comprise lab tours and own experiments: dissection of mouse organs of Corti, immunohistochemistry, patch clamp experiments, superresolution and electron microscopy, hearing tests. After completion of the module, the students will be able to <ul style="list-style-type: none"> • understand auditory function from the sound wave to the auditory cortex with a focus on synaptic transmission in sensory inner hair cells • Understand how standard tests of hearing function are done both in the clinical assessment of human patients and in the laboratory assessment of rodents • have basic knowledge on the pathophysiology of human hearing loss and rehabilitation strategies • understand how novel animal models could bridge the gap between basic research and clinical practice • understand the general AAV methodology and gene delivery techniques • understand the concept of an optogenetic cochlear implant • perform immunohistochemical labeling of inner ear tissue under supervision • perform patch clamp electrophysiology experiments on inner hair cells under supervision 		Workload: Attendance time: 31 h Self-study time: 59 h
Course: Auditory Neuroscience (Practical course, Seminar)		2,5 WLH
Examination: Written test (45 minutes), not graded Examination prerequisites: Regular attendance at the seminar and the practical course.		3 C
Admission requirements: none	Recommended previous knowledge: <ul style="list-style-type: none"> • General knowledge of the anatomy and normal function of the Inner Ear, as laid out in standard textbooks of Neuroscience (e.g. Kandel Principles of Neuroscience) or Physiology (E.g. Schmidt/Thews Physiology) or taught in the Göttingen Bachelor program of Molecular Medicine • General knowledge of synaptic structure and function • General knowledge of molecular biology and gene therapy 	
Language: English	Person responsible for module: Prof. Dr. Nicola Strenzke	

	Prof. Dr. Tobias Moser
Course frequency: once a year	Duration: Approx. 2 weeks
Number of repeat examinations permitted: twice	Recommended semester: 1
Maximum number of students: 16	

Georg-August-Universität Göttingen		4 C 3 WLH
Module M.MM.018: Modelling and Targeting Pancreatic Cancer Subtypes		
Learning outcome, core skills: After completing the module, students have gained an overview on current pancreatic cancer research with a particular focus on molecular pancreatic cancer subtypes. Students <ul style="list-style-type: none"> • have basic knowledge of the impact of pancreatic cancer subtypes on the tumour biology and the clinical course of the disease • understand the definition of pancreatic cancer subtypes from multiple angles (genetically/transcriptionally/metabolically) • know the chances and pitfalls of <i>in vivo</i> modelling of pancreatic cancer subtypes • can assess pancreatic cancer immune heterogeneity and epithelial pancreatic cancer subtypes by multiplex immunofluorescence • understand the challenges in primary tissue extraction from the surgical perspective • have trained in orthotopic transplantation on pancreatic cancer cells into mice • have knowledge of functional <i>in vitro</i> assays for studying pancreatic cancer progression • have trained in modelling therapeutic responses in pancreatic cancer via mouse ultrasound 		Workload: Attendance time: 45 h Self-study time: 75 h
Course: Modelling and Targeting Pancreatic Cancer Subtypes (Seminar)		2 WLH
Course: Modelling and Targeting Pancreatic Cancer Subtypes (Practical course)		1 WLH
Examination: Written protocol. (max. 5 pages) Examination prerequisites: Regular attendance and active participation in the seminar and practical course.		4 C
Admission requirements: none	Recommended previous knowledge: Participation in module M.MM.102.	
Language: English	Person responsible for module: Prof. Dr. Elisabeth Heßmann	
Course frequency: once a year	Duration: Approx. 4 weeks	
Number of repeat examinations permitted: twice	Recommended semester: 1 - 3	
Maximum number of students: 6		

Georg-August-Universität Göttingen		2 C 1 WLH
Module M.MM.019: Modern Aspects of Human Genetics		
Learning outcome, core skills: Using primary literature the students will obtain (i.a.): <ul style="list-style-type: none"> • an overview about established and novel, state-of-the-art methods used in the field of human genetics • insights into the main research focus including new techniques used for identification of mutations and characterization of their effects using different cellular and animal models • insights into the development of novel therapeutic strategies including CRISPR/Cas- and iPSCs-based (genome editing) approaches • a new publication from the field of human genetics that the students will use to work out the relevant methods and results described therein • coaching how to present these methods and results to an audience using PowerPoint followed by a discussion 		Workload: Attendance time: 12 h Self-study time: 48 h
Course: "Modern Aspects of Human Genetics" (Seminar)		1 WLH
Examination: Presentation (approx. 30 minutes) and discussion (approx. 15 minutes) Examination prerequisites: Regular attendance at the seminar. Examination requirements: Work out and adequate presentation of the methods, research results and procedures described in the primary literature. Discussion and questions for the understanding of the presented methods and results.		2 C
Admission requirements: Successful participation of module B.MM.106 (Molekulare Zellbiologie und Molekulare Genetik) or equivalent course	Recommended previous knowledge: Basic knowledge in molecular genetics, cell biology and tumor genetics	
Language: English	Person responsible for module: Dr. rer. nat. Gökhan Yigit	
Course frequency: each semester	Duration: 1 semester[s]	
Number of repeat examinations permitted: twice	Recommended semester: from 1	
Maximum number of students: 12		

Georg-August-Universität Göttingen Module M.MM.021: Experimental, epidemiological and clinical approaches in dermatology	3 C 2 WLH
Learning outcome, core skills: After completing the module, students: <ul style="list-style-type: none"> • are familiar with the structure, function and immunology of the skin • have an overview of immunological, cellular and molecular mechanisms of different skin disorders such as atopic dermatitis, contact dermatitis, skin fibrosis and skin cancer • have gained insights into experimental models of dermatology (<i>in vivo</i> mouse models, <i>in vitro</i> cell culture) and different analytical tools • know the most important contact sensitizers, their distribution in environment and occupation, and are familiar with patch testing and corresponding epidemiological research (including the design of an epidemiological questionnaire) • can describe how the IVDK (Information Network of Departments of Dermatology) contributes to disease surveillance and prevention • obtained practical expertise in planning, conducting and interpreting epidemiological and laboratory experiments, including literature interpretation and presentation 	Workload: Attendance time: 30 h Self-study time: 60 h
Course: "Skin biology: from homeostasis to diseases" (Lecture)	1 WLH
Course: "Revising research data for presentation" (Seminar)	0,5 WLH
Course: "Current approaches in dermatology" (Practical course)	0,5 WLH
Examination: Oral Presentation (30 minutes) Examination prerequisites: Regular attendance in seminars and courses (80%) Examination requirements: Basic knowledge of dermatological research approaches, adequate work out and presentation of methods and research results.	3 C
Admission requirements: Bachelor's degree in Molecular Medicine or a related field of study	Recommended previous knowledge: Basic knowledge in immunology, molecular biology and statistics
Language: English	Person responsible for module: Prof. Dr. med. Timo Buhl Dr. Andrea Braun
Course frequency: once a year	Duration: 3 weeks
Number of repeat examinations permitted: twice	Recommended semester: 1 - 3
Maximum number of students: 6	

Georg-August-Universität Göttingen		2 C
Module M.MM.022: Committee work in student or academic self-administration		
Learning outcome, core skills: Students acquire central knowledge of the organizational structures and decision-making processes in the academic self-administration of a faculty. They acquire the ability to participate in university committees, to represent student concerns and to critically reflect on the processes in these committees. Students develop skills in the areas of rhetoric, dialogue and discourse, as well as conversation, argumentation and conflict resolution. They gain in-depth insights into the structure, processes and function of a faculty or other organizational units of a university in the areas of study and teaching, research and administration.		Workload: Attendance time: 20 h Self-study time: 40 h
Examination: Written report at the end of each semester, not graded Examination requirements: Ability to represent and present the concerns of the student status group in the relevant bodies.		2 C
Admission requirements: Proof of activity and membership in a committee of the Faculty of Medicine or another committee of the Georg-August University; activity as student representative of the Master's program of Molecular Medicine.	Recommended previous knowledge: none	
Language: German	Person responsible for module: Prof. Dr. rer. nat. Holger Reichardt	
Course frequency: each semester	Duration: 2 semester[s]	
Number of repeat examinations permitted: twice	Recommended semester:	

Georg-August-Universität Göttingen Module M.MM.023: The Biotech Industry	2 C 2 WLH
Learning outcome, core skills: This elective module will introduce students to drug development and the biotech industry. After completion of the module, students will have gained knowledge about: <ul style="list-style-type: none"> • Stages in drug development • ICH guidelines • Structure of the CTD Dossier • Principles in toxicology, bioanalytics and the development of supporting methods • Principles of pharmacology and initial clinical development (phase 1 and 2) • Principles in advanced clinical development and biological product manufacturing • Production principles of cell therapy and drug release processes • From science to market - ways to commercialize • The biomed industry in a local and global perspective • Regulation as a key to success or failure • Product development and registration process in the light of global regulation • From the laboratory to the patient, a "simple" story of a drug • The use of artificial intelligence for drug development • Immunotherapy treatments for cancer and autoimmune diseases 	Workload: Attendance time: 24 h Self-study time: 36 h
Course: The Biotech Industry (Excursion, Seminar)	2 WLH
Examination: Minutes / Lab report	2 C
Examination requirements: Regular attendance (1 seminar may be missed without a reason, 1 additional seminar may be missed due to illness)	
Admission requirements: Bachelor's degree in Molecular Medicine or a related study program	Recommended previous knowledge: Basic lectures in life sciences
Language: English	Person responsible for module: Dr. Liat Nissimov-Brück
Course frequency: once a year	Duration: 6 weeks
Number of repeat examinations permitted: twice	Recommended semester: 1 - 4
Maximum number of students: 25	

Georg-August-Universität Göttingen		24 C 23 WLH
Module M.MM.101: Biomolecules and Pathogens		
Learning outcome, core skills: In the course of the module the students will acquire deepened molecular knowledge of the interplay between pathogens and the host defense, immunological diseases and pharmacological approaches to interfere with various disorders. The graduates know current immunological questions and methods, and are able to explain the mechanism and therapy of related diseases. They know the function and regulation of microbial virulence factors and understand their role in the pathogenesis of infectious diseases. In addition, they have extensive insight into the taxonomy and structure of viruses. The graduates know the principles of pharmacological research and current therapeutic strategies. They can apply concepts of pharmacology to practical examples and name effects of selected toxic substances. The graduates have the ability to work under supervision on a small defined scientific project using experimental methods, and to analyze and interpret the obtained data. They are able to present their results in a seminar, and to discuss and document them in written form similar to a scientific publication.		Workload: Attendance time: 322 h Self-study time: 398 h
Course: "Biomolecules and Pathogens" (Lecture, Seminar)		8 WLH
Examination: Written examination (180 minutes) Examination prerequisites: Active participation in the seminar. Examination requirements: Deepened knowledge of clinically relevant pathogens and their mechanisms, basic concepts of immune responses and their failure, and current principles of pharmacological therapy of selected diseases.		12 C
Course: "Lab Rotation" (Practical course)		15 WLH
Examination: Presentation (approx. 30 Min.) with written draft (max. 20 pages) Examination prerequisites: Regular attendance at the lab rotation. Completion of the course "Good Scientific Practice". Attendance at the occupational health and safety briefing and medical prevention. Examination requirements: Practical application of typical experimental methods to elucidate molecular, cellular and pathophysiological processes, and conclusive presentation of the obtained research results.		12 C
Admission requirements: Bachelor's degree in a related study program or successfully passed first exam in human medicine	Recommended previous knowledge: Basic lectures in microbiology, virology, immunology and pharmacology.	
Language: English	Person responsible for module: Prof. Dr. rer. nat. Holger Reichardt	
Course frequency:	Duration:	

once a year	1 semester[s]
Number of repeat examinations permitted: twice	Recommended semester: 1 - 2
Maximum number of students: 30	

Georg-August-Universität Göttingen Module M.MM.102: From Cells to Disease Mechanism	24 C 24 WLH
Learning outcome, core skills: After successfully finishing this module the students should be familiar with molecular processes within the cell and corresponding aspects associated with pathological changes and pathological tissues. They are able to describe qualitatively genetic and metabolic diseases as well as inflammatory and cancerous processes. The students are familiar with tools, concepts and methods of cell biology, pathology, human genetics and molecular/experimental oncology and thus be able to describe causes and consequences of changes within genetic and cellular processes by using typical examples. Furthermore, fundamental mechanisms in pathology, genetics and cell biology are deduced. In addition, under qualified supervision students acquire the ability to perform experimental work within the lab covering a clear cut issue. The results of this practical course will be presented within the corresponding scientific group and written down in corresponding scientific style.	Workload: Attendance time: 336 h Self-study time: 384 h
Course: "From Cells to Disease Mechanism – selected topics in cell biology, oncology, pathology and human genetics" (Lecture, Seminar)	9 WLH
Examination: Written examination (180 minutes) Examination prerequisites: Active participation within the seminar. Examination requirements: Knowledge about fundamental mechanisms in gene regulation, extended knowledge about principles in cell communications and intracellular signaling processes, mechanisms of feedback/-forward regulatory circuits in cell signaling, Hallmarks of cancer, criteria of cell transformation in in vitro und in vivo assays, models of tumor development and therapy, tools to investigate cancer cells, current concepts in cancer therapy, tumor associated viruses and their mode of action, tumorsuppressor genes and oncogenes: modern concepts and mode of action, mechanisms, regulation of cell cycle phases, cell cycle check-points, posttranslational modifications as ubiquitination and phosphorylation, regulation of mitosis and chromosome segregation, genetic instability in cancer and chromosomal aberrations (examples, formation and detection/diagnosis), general pathology of inflammation and tumor pathology, the stem cell concept, concepts about the evolution of immune related genes, genetics of inflammatory reactions/ diseases and analysis of prehistorical DNA in the context of concepts of Anthropology, selected topic of molecular and translational oncology and hematological neoplasias, knowledge about current methods to analyse DNA, proteome analysis for molecular medicine.	12 C
Course: "Lab Rotation" (Practical course)	15 WLH
Examination: Presentation (approx. 30 min.) with written draft (max. 20 pages) Examination prerequisites: Regular attendance at the lab rotation. Examination requirements:	12 C

Characteristic tools, concepts and methods to analyse molecular processes within cells and in vivo models , use methods of diagnostics, coherent and conclusive presentation of experimental data established within the lab rotation.	
Admission requirements: Bachelor's degree in a related study program or successfully passed first exam in human medicine.	Recommended previous knowledge: Basic lectures in oncology, biochemistry, pathology, cell biology, molekular biology, dermatology und human genetics.
Language: English	Person responsible for module: Prof. Dr. Dieter Kube
Course frequency: once a year	Duration: 1 semester[s]
Number of repeat examinations permitted: twice	Recommended semester: 1 - 2
Maximum number of students: 30	

Georg-August-Universität Göttingen		4 C
Module M.MM.104: Current Topics in Molecular Medicine		3 WLH
Learning outcome, core skills: After completion of the module, the participant is capable of communicating his own scientific projects to a broader audience of scientists. Furthermore, she/he is capable of introducing such an audience to a general topic of molecular medicine. She/He can summarize primary scientific literature and review articles in an overview talk. The participants will be capable of following seminar talks about a topic that they are not immediately familiar with. They are asking meaningful questions and have become able to discuss methodological approaches and scientific conclusions in a critical and constructive manner.		Workload: Attendance time: 42 h Self-study time: 78 h
Course: "Current Topics in Molecular Medicine" (Seminar)		3 WLH
Examination: Oral Presentation (approx. 30 minutes) Examination prerequisites: Regular attendance at the seminar. Examination requirements: The seminar talk must be understandable and clearly structured. It should reflect broad knowledge regarding the scientific background. The questions behind the project should be derived from this background. Methods and results should be outlined understandably, and the conclusions should be presented in a way that the audience can follow. The participants are also required to actively contribute to the discussion, to ask questions, and to evaluate the above-mentioned aspects of the presentation.		4 C
Admission requirements: none	Recommended previous knowledge: none	
Language: English	Person responsible for module: Prof. Dr. med. Matthias Dobbstein	
Course frequency: once a year	Duration: 1 semester[s]	
Number of repeat examinations permitted: twice	Recommended semester: 1 - 2	
Maximum number of students: 20		

Georg-August-Universität Göttingen		7 C 4 WLH
Module M.MM.105: The Disease-Affected Heart and Kidney		
<p>Learning outcome, core skills: After successfully completing this module the students should be familiar with molecular aspects of different renal diseases like polycystic kidney disease, diabetic nephropathy as well as with mechanisms leading to renal fibrosis.</p> <p>In molecular cardiology the student become familiar with mechanisms of different forms of heart failure, mechanisms of arrhythmia and myocarditis and the role of stem cells in tissue regeneration. In pharmacology, this knowledge is supplemented by pharmacotherapeutic strategies in the treatment of hypertension, heart failure, arrhythmia, the metabolic syndrome and thromboembolic events. An outlook on potential future therapies of cardiovascular diseases is given including gene therapy, stem-cell based therapies and tissue engineering.</p>		<p>Workload: Attendance time: 52 h Self-study time: 158 h</p>
Course: The Disease-Affected Heart and Kidney		4 WLH
<p>Examination: Written examination (120 minutes) Examination requirements: Profound knowledge of molecular mechanisms in the field of nephrology, cardiology and pharmacology as well as of therapeutic strategies to treat the respective disorders.</p>		7 C
Admission requirements: Bachelor's degree in Molecular Medicine or a related study program	Recommended previous knowledge: Basic lectures in nephrology, cardiology and pharmacology	
Language: English	Person responsible for module: Prof. Dr. rer. nat. Susanne Lutz	
Course frequency: once a year	Duration: 4 weeks	
Number of repeat examinations permitted: twice	Recommended semester: 2 - 4	
Maximum number of students: 25		

Georg-August-Universität Göttingen		5 C
Module M.MM.106: The Disease-Affected Brain		3 WLH
Learning outcome, core skills: After successfully finishing this module, students should be familiar with the neuropathological / molecularbiological hallmarks of the most important neurological diseases. Mechanisms playing a role in neurodegenerative disorders resulting from protein misfolding like Alzheimer's, Huntington's and Parkinson's disease, as well as Prion diseases will be covered. A further goal of this module is a profound understanding of the molecular mechanisms of neuromuscular diseases (including polyneuropathies, myopathies, Amyotrophic Lateral Sclerosis and Spinal Muscular Atrophy), cerebral vascular diseases (especially ischemic Strokes) and neurological autoimmune diseases including Multiple Sclerosis and its Mimics, as well as paraneoplastic and other autoimmune Encephalitides. CNS tumors and Epilepsia will also be covered. These topics are complemented by the presentation of state-of-the-art therapeutic strategies to treat the most common neurological diseases.		Workload: Attendance time: 40 h Self-study time: 110 h
Course: The Disease-Affected Brain		3 WLH
Examination: Written examination (90 minutes) Examination requirements: Profound knowledge of molecular mechanisms of neurological diseases and therapeutic approaches.		5 C
Admission requirements: Bachelor's degree in Molecular Medicine or a related study program	Recommended previous knowledge: Basic lectures in neurology	
Language: English	Person responsible for module: Prof. Dr. med. Christine Stadelmann-Nessler, PD Dr. Fabian Maass	
Course frequency: once a year	Duration: 3 weeks	
Number of repeat examinations permitted: twice	Recommended semester: 2 - 4	
Maximum number of students: 25		

Georg-August-Universität Göttingen		12 C 15 WLH
Module M.MM.107: Lab Rotation Brain and Heart		
Learning outcome, core skills: The practical work will be performed under direct one-to-one supervision in a group with expertise in a discipline linked to the field of molecular neurology or cardiology. By participating in a research project the students will learn to <ul style="list-style-type: none"> • answer scientific questions using state-of-the-art techniques • critically analyze own research data • manage time and resources in a scientific project • present and discuss own data in an appropriate written form. 		Workload: Attendance time: 210 h Self-study time: 150 h
Course: Lab Rotation Brain and Heart		15 WLH
Examination: Written lab report (approximately 20 pages) Examination requirements: Appropriate personal performance, clarity and completeness of the lab book and lab report; the lab report should be structured like a scientific publication containing the following sections: Introduction, Materials & Methods, Results, Discussion, References		12 C
Admission requirements: Bachelor's degree in Molecular Medicine or a related study program	Recommended previous knowledge: Experience in experimental methods gained during at least 300 hours of practical lab work	
Language: English	Person responsible for module: Prof. Dr. rer. nat. Holger Reichardt	
Course frequency: Individual appointment	Duration: 8 weeks	
Number of repeat examinations permitted: twice	Recommended semester: 2 - 4	
Maximum number of students: 25
